MANUAL UTERINE ASPIRATION

A FEW QUIET MOMENTS  
*and recover where*  
IT MATTERS TO YOU

# M·U·A

## MANUAL UTERINE ASPIRATION

### A 15-MINUTE PROCEDURE

Manual uterine aspiration uses a gentle suction to remove the contents of your uterus. The device, an Ipas® aspirator, does not require electricity, so it's quiet and discreet. Because no anesthesia is required, you do not need to be admitted to the hospital. So, you can recover in the comfort of home. Some choose to return to work the same day.

RELIABLE & SAFE

SHORT RECOVERY

QUIET ~ NO MACHINES

NO ANESTHESIA

FEW SIDE EFFECTS  
(minimal pain & cramping)

For specific questions or concerns, please speak with your healthcare provider.
